Curriculum Planning & Assessment Resource

Mathematics

Kindergarten Measurement 1

About This Document

This Curriculum Planning & Assessment Resource is intended to be a collection of sample activities, assessments, and resources that teachers may wish to use as they develop their unit plans. This document is not intended to be a sequential list of activities. Rather, the intent is that teachers choose from this resource what is appropriate for their context, and sequence it in their planning.

The sample activities, assessments and resources included in this document have undergone an initial review to determine appropriateness and alignment to the curriculum. However, it is expected that teachers use their professional judgement in selecting activities, assessments and resources that are appropriate for their context.

While every attempt has been made to provide credit and receive permissions, some errors or omissions may have occurred. Please contact info@arpdc.ab.ca to report any error or omissions.

Acknowledgements

Thank you to all the teachers, numeracy specialists, and technical expertise from Alberta school divisions and ARPDC who collaborated to develop, review, and revise these planning and assessment documents to support curriculum implementation.

Kindergarten Measurement 1

Organizing Idea

Measurement: Attributes such as length, area, volume, and angle are quantified by measurement.

Guiding Question

In what ways can size be distinguished?

Learning Outcome

KM1 Children explore size through direct comparison.

Summative Assessment(s) - Transfer *(In Progress)*

Summative assessments can include the following.

- *Understanding/making sense of a novel context from the real world using one or more concepts (eg. “How are place value and money related?”).*
- *Understanding/making sense of a novel context using one or more understandings (eg. Students use money to model the conversion of base 10 values and relate them to base 10 block’).*
- *Being able to describe why (linking concepts) something is true, a result, or what might be an extension using learned concepts and understandings.*
- *Apply learning (create products; undertake projects; taking action such as creating a campaign) in a novel context or taking action using the understanding(s).*
- *Construct arguments by taking a position and verifying/proving it with known understandings.*

Summative Assessment(s)

KUSP KM1.1

Assumable Curriculum / Prerequisite Knowledge / Vocabulary

Student Language | Essential vocabulary & concepts

- **Attribute:** characteristics of a set of items that allow the items to be sorted
 - Examples: measure, length, area, capacity, weight
- **Measure:** to determine the size, amount, degree or something, using standard or non-standard units
- **Length:** the measure from end to end
- **Area:** how much flat space an object covers
- **Capacity:** how much a container holds
- **Weight:** the heaviness of an object

I Know Statements | Metacognition

- I know size can be described as the length of an object
- I know the area is how much flat space an object covers
- I know capacity is how much a container holds
- I know weight is the heaviness of an object

Pre-Assessments

Nelson Leaps and Bounds pages will be referenced in the Pre-Assessments to follow up for emerging learners.

I Can Statements | Skills

- I can identify the length of an object
- I can identify the area of an object
- I can identify the capacity of an object
- I can identify the weight of an object.

Learning Recovery

Enhancement

Measuring length (distance)

Problem Solving

Stacking Challenge: "Can You Stack It?" - see illustration for ideas. Students will measure, count, sort, question, problem solve, and play.

Challenge students to select different materials (natural (from outside) and manmade) and stack them.

- stack each material and see which stacks more easily
- describe the stacks using measurement attributes

Students should test the 'stackability' of different items and possibly mix the items to see if that allows for a longer or taller or wider stack...

Prompting questions may include: "Why do you think this item stacks more easily?", "How many of these items do you think you can stack?", "Which attribute would you use to describe this stack?", etc.

KUSP KM1.2

Assumable Curriculum / Prerequisite Knowledge / Vocabulary

Student Language | Essential vocabulary & concepts

- **Compare:** To consider the qualities of two or more things or sets, to discover similarities or differences.
- **Order:** to arrange in sequence according to size, or amount
- **Length:** the measure from end to end
- **Area:** the amount of flat space covered by a shape/region
- **Capacity:** how much a container holds
- **Weight:** the heaviness of an object

I Know Statements | Metacognition

- I know when to use the words longer, taller, shorter, heavier, lighter, bigger, smaller, big enough, too big, and too small.
- I know the size of two objects can be compared.
- I know objects are measured for a reason or need

Pre-Assessments

Nelson Leaps and Bounds pages will be referenced in the Pre-Assessments to follow up for emerging learners.

I Can Statements | Skills

- I can compare the length, area, mass, height, or capacity of two objects.
- I can describe the size of an object to another object.
- I can describe a reason or need to measure an object.

Learning Outcome					
KM1.2 Children explore size through direct comparison.					
Knowledge	Understanding	Skills & Procedures	Achievement Indicators	Illustrative Examples	Assessments
<p>Comparisons of size can be described by using words such as</p> <ul style="list-style-type: none"> • longer • shorter • heavier • lighter • too big • too small 	<p>Size may refer to only one measurable attribute at a time.</p> <p>The size of two objects can be compared directly.</p> <p>The size of an object can be described in relation to a purpose or need.</p>	<p>Compare the length, area, weight, or capacity of two objects directly.</p> <p>KM1.2a</p>	<p>Compare the length (height) of two given objects; and explain the comparison, using the words <i>shorter, longer (taller), or almost the same.</i></p>	<p>Ask students to find three objects in the classroom that are the same length.</p> <p>Set out three classroom objects Which is the heaviest? Which is the lightest?</p>  <p>Which object is the longest?</p>  <p>Which object is the shortest?</p> 	<p>KM1.2a Comparing Weight - deep</p> <p>KM1.2a Balancing Act - deep</p> <p>KM1.2a Whose Bag is Heavier? - deep</p>

Compare the mass (weight) of two given objects; and explain the comparison, using the words *lighter, heavier, or almost the same.*

Which object is heavy?

Which object is light?

<https://www.liveworksheets.com>

Which is heavier, a toy car or a toy dinosaur?

Which line is longer?

Explain your reasoning.

Compare the volume (capacity) of two given objects; and explain the comparison, using the words *less, more, bigger, smaller, or almost the same.*

Which has the greater capacity, the bottle or the jug?

www.ncetm.org.uk/masterypd

Captain Conjecture says, 'All of the glasses contain the same quantity of lemonade.'

Do you agree?

Explain your reasoning.

www.ncetm.org.uk/masterypd

Compare the area of two given objects; and explain the comparison, using the words *less, more, bigger, smaller, or almost the same.*

Label the images using comparison words: bigger, smaller, holds the most, holds the least, etc.

Describe the size of an object in relation to another object, using comparative language.
[KM1.2b](#)

Students will get two objects to describe using comparative language.

The robot is taller than the dinosaur.
The dinosaur is shorter than the robot.

The pencil is longer than the crayon.
The crayon is shorter than the pencil.

Surface Level Activities

- **Size Detective:** Play with the whole class or a small group. Materials: overhead projector, objects Directions: Place a pencil on the overhead. Ask students to look for something that is longer/shorter than the pencil. Place their objects on the overhead to compare. Continue with other objects. Ask students to make collections of objects that are similar, shorter, or longer in length.
- **Supply craft supplies** so students can make objects of specific lengths, such as, as long as your foot, as short as their thumb, and the same length as this paper.
- Ask students to use **unifix cubes to make trains** that are longer than, shorter than, and the same length as a given object.
- Provide class with **strips of ribbon and one stick approximately 30 cm long.** Have students sort ribbons into three groups: shorter than, longer than, and the same length as the stick.

Describe the size of an object in relation to a purpose or need, using comparative language.
[KM1.2c](#)

Parking Lot Problems: Students will compare the amount of space needed in a parking lot for various-sized vehicles.

Which object will fit in the box?

* **Note:** Students may assume that large objects are automatically heavier and small objects lighter. They need to have opportunities to pick up and compare objects of different sizes, shapes, and masses.

Note: When pouring from one container to another, a student may believe that the second container holds more if the level appears higher, even if they pour the contents back into the first container.

Example:

This is because the child is not yet conserving the capacity of the container or the volume of the material in it. Students need to be aware of the common usage of the word "full." A full glass of milk is one in which the volume of milk measures less than the capacity of the glass. If a student fills a glass to the brim with milk, he or she is likely to be told that the glass is too full. There are many instances of this anomaly in daily life (e.g., a full bottle of pop, a room full of people, a box full of blocks, etc. [Kindergarten Mathematics Support Document for Teachers: Manitoba Curriculum](#))

Indigenous Lesson Plans and Resources

Kneel Jump (Comparing Length):

[Metis and Inuit Games/Activities: Kneel Jump Game \(Traditional Inuit Game\)](#)

Measuring length (distance)

- Students will begin at a designated starting point and jump forward from knees to a squatting position (click link for picture examples).
- After one student jumps, mark their spot with a piece of tape with their name on it. When the next student jumps, mark the landing spot and compare it to the reference point. Encourage students to use measurement vocabulary to describe the jumps (Kim's jump was longer than Sam's jump). The longer jump becomes the new reference point. At the end of the game, ask students whose jump was the longest? How do you know?

Problem Solving

Stacking Challenge: Part 2

Students will measure, count, sort, question, problem solve, and play.

Challenge students to select different materials (natural (from outside) and manmade) and stack them.

- stack each material and see which stacks more easily
- describe the stacks using measurement attributes

Students should test the 'stackability' of different items and describe it using a measurement attribute.

Next: ask students to design the stack, possibly mixing the items to see if that allows for a longer or taller or wider stack...

Prompting questions may include: "Why do you think this item stacks more easily?", "How many of these items do you think you can stack?", "Which attribute would you use to describe this stack?", "**Compare your stack to this item [teacher item of choice].**", "**How did you make this stack [longer, taller, wider, ...]?**", etc.
